

Computer Organization and Architecture

MID LAB QUIZ

Total Marks: 30

1. Write a complete 8086 assembly language program using the .MODEL SMALL memory model that produces **exactly** the following output on the screen (including the exact number of lines and blank lines):

AAA

AAA

AAA

BBB

BBB

BBB

BBB

BBB

CCC

CCC

2. **Print numbers 1 to 30, but skip every multiple of 7 and print “LUCKY” instead.**

Use conditional jumps. Exact output snippet:

2 3 4 5 6 LUCKY 8 9 10 11 12 13 LUCKY 15 ...

... 27 28 29 30

3. **Print the following right-triangle using nested loops and jumps (no hardcoded strings longer than 5 characters):**

#

##

###
